FIT AND SECURE

2.1

Determine the best possible position for mounting the tracks.

Make sure that the mounting points are clear of any hidden reinforcements that may cause complications when installing the hardware.

2.2

Measure and trim the Tracks to the desired length. Trim at 45 degree angle and match on opposite side. Use a satin black paint to touch up (not included).

2.3

Drill holes in the Track. Measure 30mm from each end of the track and make a mark. According to the amount of fasteners you are going to use, equally space the rest of the holes on the track. Drill a 4mm pilot hole on all the marks you have made. Open the pilot holes to 6.5mm. Countersink all holes to suit M6 Countersink Screw.

2.4

Once you are happy with the placement of the track, mark all the holes using a suitable marking pen.

2.5

Drill a 4mm pilot hole on all the marks you have made. Open the pilot holes to 6.5mm.

2.6

Apply a bead of suitable sealant to each hole drilled in step 2.4.

2.7

Fit and secure the track using M6 x 30 Countersink Screws, M6 x 30 x 1 Flat Washers and M6 Nyloc Nuts (Items 3, 4 & 5).
